| Learning | Outcomes |
|----------|----------|
|----------|----------|

- 1 Will be able to associate the theoretical knowledge about logistics and supply chain management with real operations
- Have prior experience of the interrelationships and interactions between the internal and external parties involved in the company's supply chain and the relevant logistics functions.
- 3 Improve their ability to improve logistics processes, recognize problems or take necessary measures in case of problems
- In line with the applications, students will have knowledge and experience in key issues such as learning, managing, analyzing, decision making, strategy and system development in a practical way in business structure and main concepts.
- They will gain experience and knowledge about reporting techniques in all logistics processes and the importance of effective / accurate reporting.

Programme Outcomes (Logistics)

- 1 Understanding of the basics needed for the mobility of production and consumption ware
- 2 Give storage and inventory management decisions
- 3 To decide about types of transportation and handling equipment to be used to decide
- 4 Logistics information systems take advantage of the process of realization of activities
- 5 Be the judge national and international legislation regulating the field of logistics
- 6 Administration, management and marketing topic about give an idea
- 7 To be sensitive to the requirements of professional ethics
- 8 Provide an idea about the the national and international transport policies
- 9 To have written and spoken communication skills
- 10 Living in society and to understand the world

Contribution of Learning Outcomes to Programme Outcomes 1: Very Low, 2:Low, 3: Medium, 4: High, 5: Very High
