

AYDIN ADNAN MENDERES UNIVERSITY COURSE INFORMATION FORM

Course Title		Green Functions For Physicists								
Course Code		FİZ408		Couse Level		First Cycle (Bachelor's Degree)				
ECTS Credit	7	Workload	175 <i>(Hours)</i>	Theory		3	Practice	0	Laboratory	0
Objectives of the Course		The representation of Green function method which is a strong tool for solving many boundary and initial value problems.								
Course Content		Historical evolution of elementary particle physics, elementary particles and their properties and basic interactions.								
Work Placement		N/A								
Planned Learning Activities and Teaching Methods			Explan	ation	(Presentat	tion), Discussio	on			
Name of Lecture	er(s)									

Assessment Methods and Criteria

Method	Quantity	Percentage (%)
Midterm Examination	1	30
Final Examination	1	70
Quiz	10	10

Recommended or Required Reading

1 Green's Functions, G.F. Roach, 1982.

Week	Weekly Detailed Court	e Contents				
1	Theoretical	The representation of Green function method on a simple problem				
2	Theoretical	Vector spaces				
3	Theoretical	Linear transformations				
4	Theoretical	Finite dimensional systems				
5	Theoretical	Continuous functions				
6	Theoretical	Integral operators				
7	Theoretical	Generalized Fourier series and complete vector spaces				
8	Intermediate Exam	Midterm Exam				
9	Theoretical	Differential operators-I				
10	Theoretical	Differential operators-II				
11	Theoretical	Integral equations-I				
12	Theoretical	Integral equations-II				
13	Theoretical	Applications-I: thermal equation				
14	Theoretical	Applications-II: oscillating membrane				
15	Final Exam	FINAL EXAM				

Workload Calculation

Activity	Quantity	Preparation	Duration	Total Workload	
Lecture - Theory	14	4	3	98	
Quiz	10	1.5	0.5	20	
Midterm Examination	1	25	2	27	
Final Examination	1	28	2	30	
Total Workload (Hours) 175					
	7				
*25 hour workload is accepted as 1 ECTS					

20 Hour workload is accepted as T L

Learning Outcomes

- 1 must have the ability of using the Green function to solve ordinary differential equations
- 2 must have the ability of using the Green function to solve partial differential equations

- 3 must have the ability of using the Green function to solve problems related to subject in classical mechanics
- 4 must have the ability of using the Green function to solve problems related to subject in classical electrodynamics
- 5 must have the ability of using the Green function to solve

Programme Outcomes (Physics)

-	
1	To understand the importance of physics by understanding the general concepts of physics, matter and energy
2	To be able to define the movements of matter and to distinguish the characteristics of movements under different force (potential)
3	Be able to say the meaning of Lagrange and Hamiltonian formulations of the movement and apply them to simple problems,
4	To be able to express the fundamental concepts such as time, space, force, momentum and energy in the movements of matter close to the speed of light and be able to solve and interpret the simple problems related to
5	To be able to establish the relationship between electric and magnetic forces and to be able to illustrate their applications to technology and solve problems related to the movement of particles in electric and magnetic fields
6	Be able to say the basic laws of electromagnetics and apply them to problems, illustrate their applications to simple technology
7	To be able to tell the reasons of the differences between the classical cases and the quantum scale and explain the reasons
8	Explain the concepts of discontinuity, uncertainty, matter-antimatter, indecisiveness of quantum physics with examples and explain simple problems related to the subject.
9	To be able to solve the problems of micro-particles under different simple potentials and be able to say their meanings
10	To be able to establish the relationship between the movements and properties of multi-particle systems and the laws of probability and solve simple problems
11	To be able to illustrate the laws, meanings and applications of thermodynamics and use them
12	Be able to use their knowledge about quantum physics and mechanics in explaining some properties of atoms and nuclei
13	To be able to show the meanings of some theoretical concepts by experimenting, and develop a strong relationship between thought and the real world, develop analytical thinking
14	To be able to apply the meanings of the basic laws of physics, their comprehension of universality and the relations between them and the unity of the laws of nature.
15	Use computer to solve physics problems
16	To be able to understand the problems by using their analytical knowledge skills and to propose solutions by dealing with the laws of physics
17	Be able to use the knowledge of physics to understand new technologies
18	To be able to tell the relations between symmetry and conservation laws in laws of physics

Contribution of Learning Outcomes to Programme Outcomes 1: Very Low, 2: Low, 3: Medium, 4: High, 5: Very High

	L1
