

## AYDIN ADNAN MENDERES UNIVERSITY COURSE INFORMATION FORM

Course Title		Basic Biophysics II							
Course Code		BYF504		Course Level		Second Cycle (Master's Degree)			
ECTS Credit	6	Workload	150 ( <i>Hours</i> )	Theory	2	Practice	0	Laboratory	0
Objectives of the Course		The purpose of the course is to be ato tell about basic bioenergetics principles, information concept, molecular biophysical cellular differentiation, cell reproduction, cancer notion, photodynamic detection and photodynamic therapy.							
Course Content		Basic bioenergetics principles, information concept, molecular biophysical cellular differentiation, cell reproduction, cancer notion, photodynamic detection and photodynamic therapy are examined.							
Work Placement		N/A							
Planned Learning Activities and Teaching Methods				Explanation (Presentation), Discussion, Individual Study, Problem Solving					
Name of Lecturer(s)									

### Assessment Methods and Criteria

Method	Quantity	Percentage (%)
Midterm Examination	1	20
Final Examination	1	60
Quiz	2	10
Assignment	2	10

### Recommended or Required Reading

1	Ferit Pehlivan, Biophysics, Hacettepe-Taş yayınevi, Ankara, 2011.
2	Şefik Dursun (ed.) Biophysics Lempeture notesı, CTF Yayınevi, İstanbul, 2010.
3	. Bilgin MD, Biomedical application of photosensitizer, PhD tezi, 1999.
4	Grossweiner L.I., J.B. Grossweiner, B.H. G. Rogers, L.R. Jones, The Science of Phototherapy: An Introduction, 2005
5	Guyton ve Hall, Medical Physiology, 2010
6	Lodish&Baltimore et al (eds.), Moleculer Cell Biology, 2004.

Week	Weekly Detailed Course Contents	
1	Theoretical	Thermodynamic concepts and laws
2	Theoretical	Temperature and heat, mechanisms for the regulation of heat in the body
3	Theoretical	Bioenergetics
4	Theoretical	Eenergy transfer in biomolecular systems
5	Theoretical	Information concept
6	Theoretical	Cell differentiation and effective biophysical agents
7	Theoretical	Cell proliferation and effective biophysical agents
8	Intermediate Exam	Midterm exam
9	Theoretical	Cancer and biophysics
10	Theoretical	Biophysical methods in cancer diagnosis and treatment
11	Theoretical	Ligt tissue interactions and photosensitization
12	Theoretical	The use of photosensitization in medicine: Phototherapy, PUVA, photodynamic treatment
13	Theoretical	Photodynamic diagnosis and photodynamic treatment
14	Theoretical	Photodynamic treatment: photosensitizer, light anf its usage areas
15	Theoretical	Discussion
16	Final Exam	Final exam

### Workload Calculation

Activity	Quantity	Preparation	Duration	Total Workload
Lecture - Theory	14	0	2	28
Assignment	2	0	10	20
Reading	14	0	6	84

Quiz	2	0	1	2
Midterm Examination	1	5	2	7
Final Examination	1	7	2	9
Total Workload (Hours)				150
[Total Workload (Hours) / 25*] = <b>ECTS</b>				6
*25 hour workload is accepted as 1 ECTS				

### Learning Outcomes

1	To be able to tell about the modynamics and bioenergetics
2	To be able to explain the biophysics of cell proliferation
3	To comprehend the relation in between cancer and biophysics
4	To be able to tell about light tissue interactions, photosensitization and its usage in medicine
5	To comprehend photodynamic diagnosis and treatment

### Programme Outcomes (Biophysics Master)

1	To be able to acquire an up-to-date theoretical and pratical background on biophysical and electrobiophysical research
2	To be able to acquire a background needed for basic biophysical research and having the ability to use the teoritical and practical knowledge in the field
3	To be able to attain the ability to get access to the up-to-date knowledge, interpret and improve the information in the field of biophysics
4	To be able to attain the ability to perform experimental methods in the field, produce new approaches and ability to produce analytical solutions to the problems faced during application of new methods
5	To be able to reach a level to follow research in the field, to possess written and spoken communication skills and be able to join discussions
6	To be able to acquire knowledge and skill to apply scientific principles of ethics.
7	To be able to gain knowledge and skill about the basic issues of electric and magnetic fields, the interaction of light with matter, spectroscopy, radiation biophysics such as radiation, electromagnetic spectrum, ionizing radiation and radioactivity; learn about the physical properties of these issues and to be able to evaluate biological effects of radiation on tissues
8	To be able to construct knowledge and skill about the molecular structure and function in living systems, bioenergetic concepts, information theory and the processing of information in living systems
9	To be able to master about the basic principles of bioelectrical incidents that ocur in cells, such as transport across membranes, electrical properties of membranes, resting membrane potential, and to be able to discuss the bioelectrical behaviour of excitable membranes
10	To be able to define the kinds,sources and biophysical properties of bioelectrical signals, to store knowledge in areas of biophysical concepts and characteristics such as nerve action potential and compound nerve action potential and to record to record these potential variants ,analyze and evaluate the results
11	To be able to define basic biophysical principles of the visualization techniques used in medical field and the techniques used to determine biological signals, such as electromyigraphy (EMG), electroencephalography (EEG), and electrocardiography (ECG), and attain the ability to apply these techniques
12	To be able to attain knowledge on molecular biophysics and its basic principles
13	To be able to attain the ability to plan and conduct projects in the field of biophysics, and attain the ability to write and publish scientific results
14	To be able to acknowledge the national and international laws and regulations about the concepts related to biophysics
15	To be able to attain the skills to organize activities together with non-governmental organizations or to conduct collaborative projects with other disciplines
16	To be able to acquire the ability of critical thinking, making judgements and solving problems in the field of biophysics
17	To be able to able to use statistical, computational and communicational tools, which can be applied in the field of biophysics
18	To be able to use basic knowledge and skills of the field; be able to evaluate data, identify problems and propose solutions

### Contribution of Learning Outcomes to Programme Outcomes 1:Very Low, 2:Low, 3:Medium, 4:High, 5:Very High

	L1	L2	L3	L4	L5
P1	5	5	5	5	5
P2	4	4	4	4	5
P3	5	5	5	5	5
P4	4	4	4	4	5
P5	5	5	5	5	4
P6	3	3	4	3	3
P7	3	2	3	5	4
P8	5	5	4	3	3

P9	2	2	3	2	3
P10	2	2	4	2	2
P11	1	1	3	5	3
P12	1	4	3	2	3
P13	3	4	3	4	3
P14	2	2	3	2	3
P15	2	3	3	4	3
P16	4	4	3	4	3
P17	2	3	3	3	4
P18	4	4	5	4	4
